Ring Size Guide

Finger sizes can change throughout the day depending on the weather. For best results SENSEA recommends that you measure your finger at the end of the day when the fingers are warmer rather than cold.

Here are some measuring tips

- Your ring needs to fit comfortably
- It needs to be tight enough to fit over the knuckle but not too loose that it slides over it too easily.
- Check SENSEA's comparative table if you already know your ring size and want to order it in the right conversion.

Not sure of your size but already have a ring that fits perfectly?

- Hold your ring over each circle until it just covers the black line of the inside circumference, this will be the size.
- Half sizes are determined if your ring size falls between two of the circles.

Note: *If the ring you are measuring is thinner in width compared to your desired purchase you might want to have it slightly bigger to ensure that it fits correctly or visa versa.*

Still undecided?
